

Branding your Site

Last Modified on 03/05/2018 3:48 pm EST

You can configure a bit of the site as you see fit. To do so, you must be part of a group that has **View & Edit** privileges on **Program Settings**. Things you can change:

- **Program Info**: change the site organization and program name in the upper left, program description, and planned budget
- **Security**: enable SSL; add a custom login message
- **Features**: enable/disable optional features system-wide for all users
- **Local Info**: change country codes, currencies, and display languages
- **Branding**: change the site logo

To access any of these settings, hover over the **Administration** menu, look in the **Configuration** section, and click on **Program Settings**.

The screenshot shows the DevResults dashboard interface. At the top, there is a navigation bar with 'Sample Org' and 'Sample Project' logos, a search bar, and a 'Help' button. Below the navigation bar, there are several tabs: 'Dashboard', 'Activities', 'Results', 'Calendar', 'Documents', 'Photos', and 'Administration'. The 'Administration' menu is open, showing a list of options under 'Configuration', with 'Program Settings' highlighted. The main content area displays various data visualizations, including a map of the world, a line chart for '4.2-b-D # graduates from USG-supported tertiary education programs', and a bar chart for '3.1-a # people living with HIV/AIDS (PLHIV) reached with a minimum package of prevention with P...'. The URL at the bottom is 'https://demo.devresults.com/en/administration/config/settings'.

Program Information

The screenshot shows the 'Program Settings' page in DevResults. The page is divided into several sections: 'Program Information', 'Local Information', 'Security', and 'Branding'. The 'Program Information' section is highlighted with an orange box and contains the following fields: 'Program Name' (Sample Project), 'Organization' (Sample Org), 'Web Address' (demo.devresults.com), 'Program Description' (Paragraph-length description of this program (optional)), and 'Planned Budget' (850,000). The 'Local Information' section contains fields for 'Country or Region' (Haiti), 'Country Code' (HT; Haiti), 'Primary Currency' (USD (United States dollar)), and 'Local Currency' (HTG (Haitian gourde)). The 'Security' section has a checkbox for 'Enable HTTPS' (checked) and a text field for 'Login Message'. The 'Branding' section is currently empty.

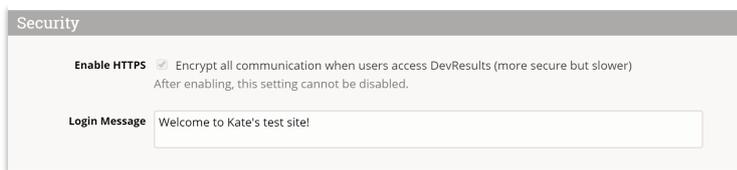

This section lets you edit the site's:

- **Program name** (larger text in upper left of all screens)
- **Organization** (smaller text in upper left of all screens)
- **Program description**
- **Planned budget**

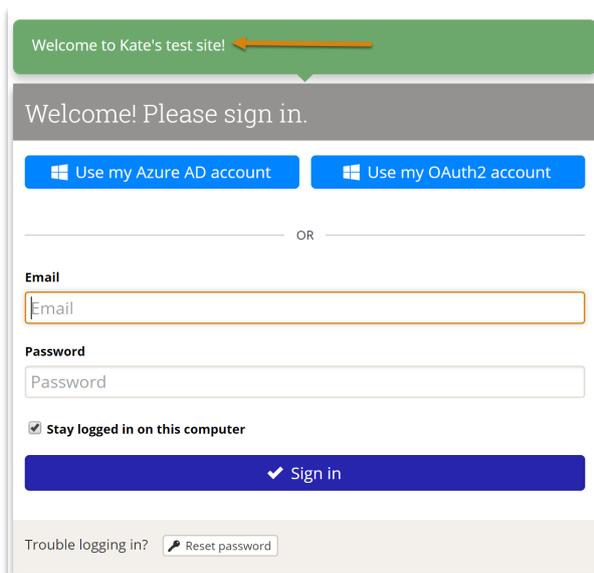

Simply click in any of the relevant boxes and edit the text.

Security

This section lets you edit two security-related settings:

- **Enable HTTPS:** For older sites, we allowed you to enable/disable HTTPS. With newer security protocols, we no longer allow you to toggle back to http. But if you're still using http, you can switch to https by checking this box.
- **Login message:** Optionally, you can add a message to the login window that appears when users first navigate to the site. To edit, click in the box and type or copy/paste the message you'd like. The text gets inserted above the login screen where users enter their email and password:

Features

Features

You may turn off features that won't be needed by this program.

- Awarding Organizations
- Budget
- Calendar
- Checklists
- Data Table Row Locking
- Discussions
- Document Library
- Form Library
- Multiple Funding Sources
- Performance
- Photo Library

This section lets you disable features that you're not using--and hide tabs related to them. (Note: if your site administrators have already made changes, your screenshot will look different from this.) Checking and unchecking these boxes does not delete any existing underlying data--it just impacts whether or not those tabs/features are displayed to users. These changes are site-wide.

See [Change Menu Options for Activities](#) for more details on what each feature controls.

Local Information

Local Information

Country or Region

Country Code

Primary Currency

Local Currency

Languages
Users will be able to choose among these languages for using this system.

- Français (French)
- Español (Spanish)
- Português (Portuguese)
- العربية (Arabic)
- 中文 (Chinese)
- Русский (Russian)

This section allows you to change your primary country/country code, the primary/secondary currencies on your site, and the display languages that you allow users to select. (Your screen will look different based on your site's configuration.)

- To edit the **Country or Region**, simply type in the title you'd like to use. For multi-

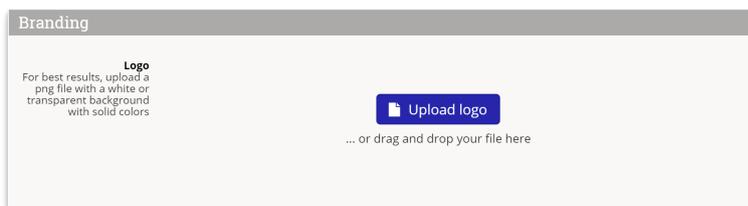

country instances, we use "World" by default, but you are welcome to edit this to something more fitting.

- The **Country Code** indicates the primary country you're working in. For single-country instances, we've pre-populated this. For multi-country instances, we recommend using "World". You must select an existing option from the dropdown menu.
- **Primary currency** and **Local currency** generally only get used if you're using **Budget** features within the system or using finance-related dashboard widgets. To set them, select the appropriate currency from the dropdowns.
- **Languages:** We have a set number of languages that will auto-translate all menu headings and system text. Once you've enabled a language for the site, users can opt to use this by clicking their profile picture in the upper right and selecting the language at the bottom of that menu:

Note: Our language translators will only translate *system* menu headings and text, not Activity titles, Indicator titles, etc.

Branding

This section lets you upload your organization or program's logo to replace the default DevResults logo in the upper left. The uploader works best with .png files in grayscale. We convert the file to white/grayscale to fit the overall DevResults color theme.

To add your logo, click the **Update Logo** button, select the logo image you have, and click OK. The site should update for all users once you've uploaded the file.

Once you've uploaded a logo, the Update Logo button becomes **Clear Logo**, and you can click this to remove the uploaded file and start over again.

If your logo does not look good after uploading, please [send us the file](#) and we'll work with you to get a more satisfactory image uploaded.
