

# Formula Indicator Results Missing from Pito

Last Modified on 10/30/2017 9:32 am EDT

**The Problem:** You've set up a new formula indicator, hit "Recalculate Results", and checked the **Reports** tab. You see data and a graph. Then, you hop over to Pito to run a report on this indicator, and see an unpleasant message: "No results were found - please try a different search". Potentially, you might not see your indicator listed at all.

Before you submit a ticket to us, please click on the **Filter indicators** button in the lower left and be sure that "Hide computed indicators" is **not** checked. With the box unchecked, you should be able to find your formula indicator in the left-hand panel.
