

# Upload Photos

Last Modified on 04/09/2018 3:35 pm EDT

DevResults allows you to store photos. Every photo is associated with an activity. Photos are uploaded to an activity page and then all photos can be viewed in the global Photos tab in the grey menu at the top of the page. Photo storage is unlimited.

To upload a photo, go to the blue Photos tab of your activity page.

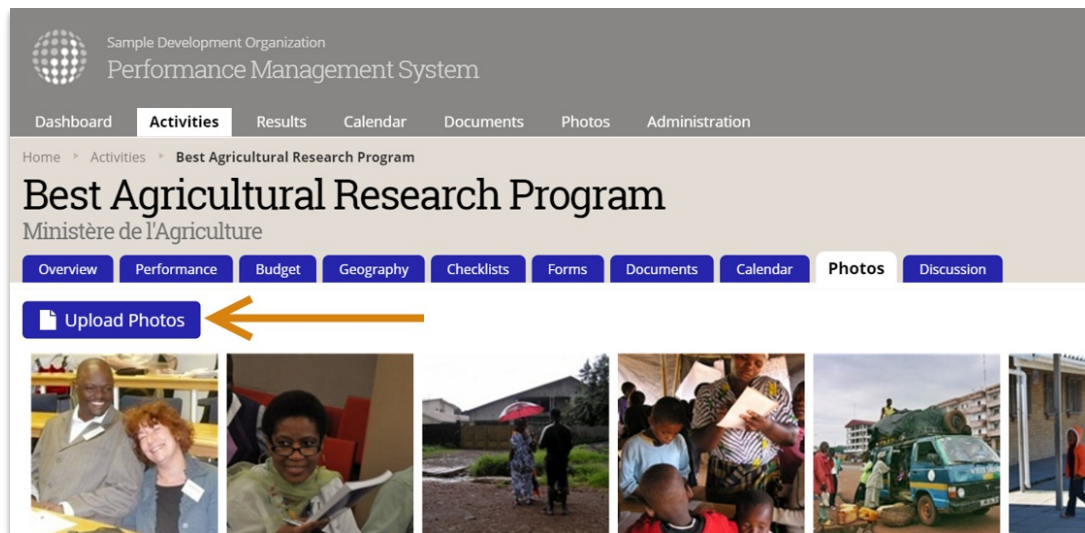

*Remember: The menu at the top in grey is your global menu. The menu in blue is for your activity. You want to go to the **blue Activity Photo tab**.*

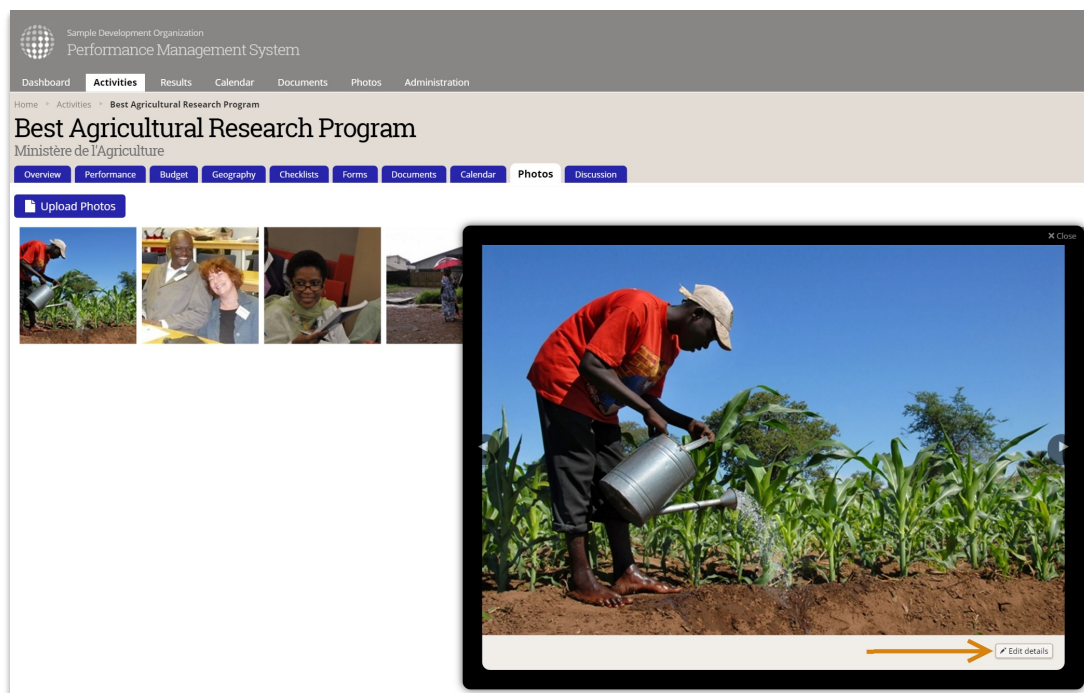

You will be able to see all of the photos associated with that activity. To add photos under the activity, click the on the button that says "Upload Photos" and select the image you want from your files.

*Note: If you do not see an "Upload Photos" button, you do not have permission to edit photos. Please speak with your supervisor.*

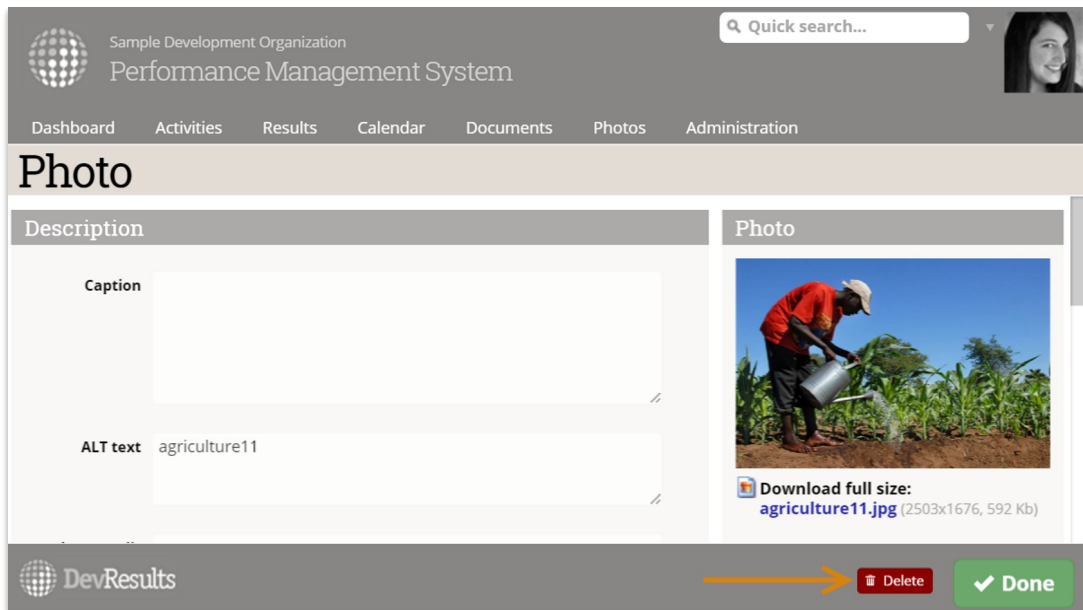

DevResults supports .jpg, .jpeg, .gif, and .png formats. You can add multiple files at the same time.

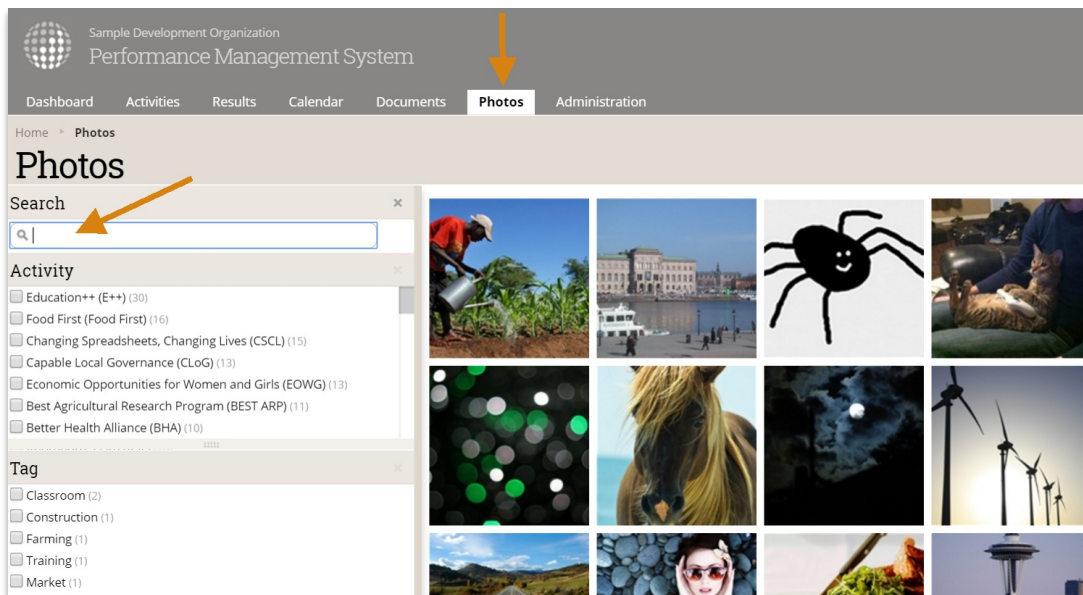

Once you upload the photo, click on the thumbnail to see the full image. You can click "Edit details" to provide more information, including a caption, photo credit, date, tags, and location.

You can also delete photos from this view.

To view the photos from all of your activities, go to the global Photos tab at the top of your screen in grey. This gallery allows you to filter the photos by activity or by tag. You can use the search bar to find photos based on text in the caption. Clicking on the thumbnail here will also allow you to edit the details of a photo.
