

Formatting Text

Last Modified on 06/29/2017 2:07 pm EDT

You can format text in DevResults using Markdown. Markdown uses simple characters to create headers, emphasis, lists, links, and images.

The places in DevResults where you can use Markdown include:

- Activity overview pages
- Indicator definition pages
- **Narrative responses** each reporting period

The examples below show how to type the formatting and how it appears when you're done.

Headers

```
# H1
## H2
### H3
#### H4
##### H5
##### H6
```

Alternatively, for H1 and H2, an underline-ish style:

```
Alt-H1
=====
```

```
Alt-H2
-----
```

H1

H2

H3

H4

H5

H6

Alternatively, for H1 and H2, an underline-ish style:

Alt-H1

Alt-H2

Emphasis

Emphasis, aka italics, with *asterisks* or *underscores*.

Strong emphasis, aka bold, with **asterisks** or **underscores**.

Combined emphasis with ***asterisks and underscores***.

Strikethrough uses two tildes. ~~Scratch this.~~

Emphasis, aka italics, with *asterisks* or *underscores*.

Strong emphasis, aka bold, with **asterisks** or **underscores**.

Combined emphasis with ***asterisks and underscores***.

Strikethrough uses two tildes. ~~Scratch this.~~

Lists

(In this example, leading and trailing spaces are shown with with dots: ·)

```
1. First ordered list item
2. Another item
  ...* Unordered sub-list.
1. Actual numbers don't matter, just that it's a number
  ...1. Ordered sub-list
4. And another item.

...You can have properly indented paragraphs within list items. Noti

...To have a line break without a paragraph, you will need to use tw
...Note that this line is separate, but within the same paragraph...

* Unordered list can use asterisks
- Or minuses
+ Or pluses
```

1. First ordered list item
2. Another item
 - Unordered sub-list.
3. Actual numbers don't matter, just that it's a number
 - i. Ordered sub-list
- 4.

And another item.

You can have properly indented paragraphs within list items. Notice the blank line above, and the leading spaces (at least one, but we'll use three here to also align the raw Markdown).

To have a line break without a paragraph, you will need to use two trailing spaces.

Note that this line is separate, but within the same paragraph.

(This is contrary to the typical GFM line break behavior, where trailing spaces are not required.)

- Unordered list can use asterisks
- Or minuses
- Or pluses

Links

There are two ways to create links.

```
[I'm an inline-style link](https://www.google.com)
```

```
[I'm an inline-style link with title](https://www.google.com "Google")
```

```
[I'm a reference-style link][Arbitrary case-insensitive reference text]
```

```
[I'm a relative reference to a repository file](../blob/master/LICENSE)
```

```
[You can use numbers for reference-style link definitions][1]
```

Or leave it empty and use the [link text itself].

URLs and URLs in angle brackets will automatically get turned into links (but not in `code` blocks):
`http://www.example.com` or `http://www.example.com` and sometimes `example.com`.

Some text to show that the reference links can follow later.

```
[arbitrary case-insensitive reference text]: https://www.mozilla.org
```

```
[1]: http://slashdot.org
```

```
[link text itself]: http://www.reddit.com
```

I'm an inline-style link

I'm an inline-style link with title

I'm a reference-style link

I'm a relative reference to a repository file

You can use numbers for reference-style link definitions

Or leave it empty and use the **link text itself** .

URLs and URLs in angle brackets will automatically get turned into links.

<http://www.example.com> or **<http://www.example.com>** and sometimes `example.com`.

Some text to show that the reference links can follow later.
