

Why is there Nowhere to Enter Data on the Results Page?

Last Modified on 01/09/2019 8:46 pm EST

The Problem:

You are trying to enter or edit data on an indicator's **Targets & Data** tab -- but under the "Results" section, there are no rows in which to enter data:

The screenshot shows the DevResults interface for indicator '# of new users trained'. The 'Targets & Data' tab is selected. The 'Results' section is highlighted with an orange box, showing a table with columns for Location, Gender (Female, Male, Unknown), Total, and Comment. The table is currently empty.

First, if this indicator is reported on by one or more activities, make sure that you select that activity from the **Show results for** drop-down.

You cannot enter indicator results for the whole program if results are attributed to specific activities.

The screenshot shows the DevResults interface for indicator '# of new users trained'. The 'Show results for' drop-down menu is highlighted with an orange arrow, showing the option 'Show results for (All activities)'. The 'Results' section is empty, displaying the message 'No data has been entered for this indicator.'

If you still see no rows in which to report indicator results, here's some background information necessary for understanding this problem:

All indicators are defined with a specific geographic disaggregation, or what we call a **Reporting Level**. There are two types of reporting levels:

1) **Locations** are identified by a set of coordinates and include places like cities, villages,

farms, schools, and hospitals.

2) **Administrative Divisions** are associated with a shape file that denotes an area on a map and include places like regions, districts, provinces, prefectures, or the whole country.

 Location
 Commune
 Canton
 Entity
 Bosnia and Herzegovina

Activities Is this indicator reported on by specific activities?
 Results are reported separately for each activity Targets are set separately for each activity

Activity	Reporting Cycle
Test Activity	Quarterly

[+ Add an activity...](#) [Allow reporting cycles to vary over time](#)

If your indicator is defined with a **Location** reporting level, then the rows for your reporting page should be locations.

If your indicator is defined with an **Administrative Division** reporting level (such as a district, province, department, governorate, etc.), then the rows for your reporting should be regions, *etc.*

If your indicator is not disaggregated geographically (i.e. Indicator results are associated with the whole country) then the reporting level should be the country's name.

Finally, the problem:

If your Targets & Data page has no rows for data entry, the most common problem is that this activity is not matched to any locations, regions, *etc.* (or the whole country).

The managers of this site will then need to:

- **Assign a Geography to an Activity**
