

Who Has Access to Data Tables

Last Modified on 06/29/2018 12:37 pm EDT

System administrators for your DevResults site can **set permissions for data table access for all user groups** . Each user group within your organization can have:

- "View & Edit" or "View" access to all data tables, or
- "No Access" to any of them.

The screenshot shows the 'Contributors' page in the DevResults system. The 'Permissions' tab is active, displaying a table of permissions for various sections. The 'Data Table Contributor' section is highlighted, showing 'View & Edit' access.

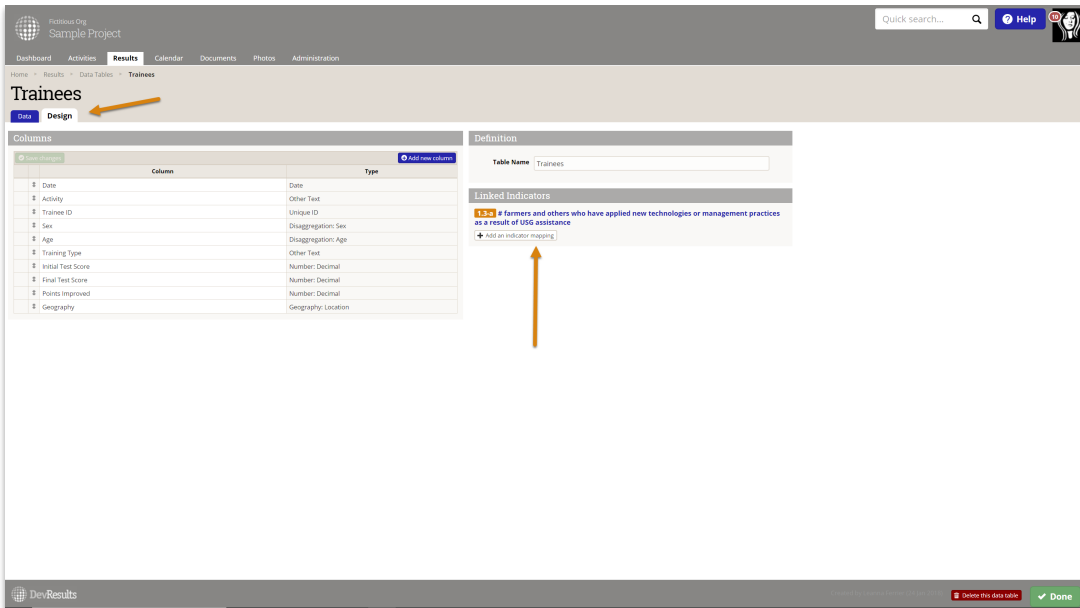

Section	Access
Activity Discussions	View & Edit
Activity Forms	View & Edit
Activity Overview	View & Edit
Calendar	View & Edit
Checklists	View & Edit
Custom Queries	No Access
Data Table Contributor	View & Edit
Data Table Manager	View & Edit
Diagnostics	No Access
Documents	View & Edit
Embed Codes	No Access
Financial	View & Edit
Geographic Information	View & Edit
Groups	View
Indicator Definitions	View
Indicator Results	View & Edit
Indicator Targets	View & Edit

Partner permissions

Partners and Partner Managers are a special case. These user groups get access to particular data tables when:

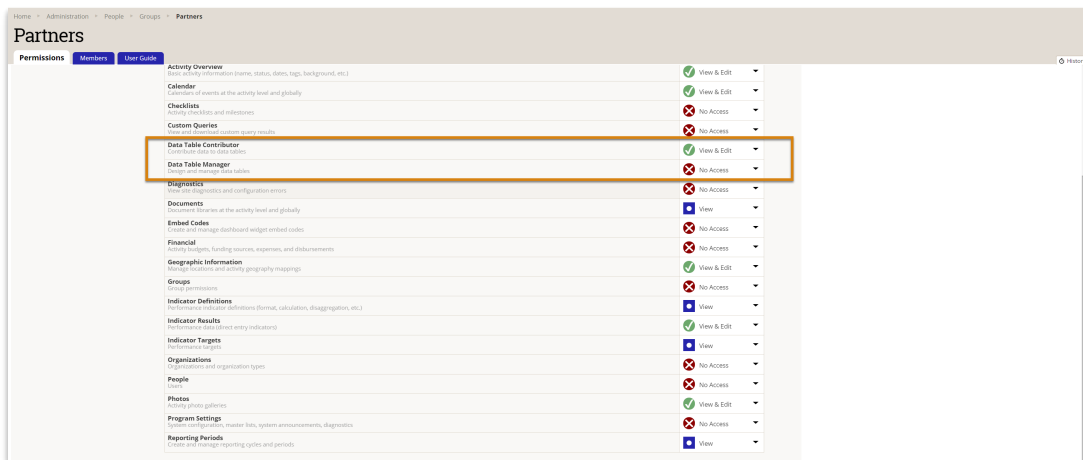

There is an "Activity" column in the data table **AND**

1. Any of the partner's activities are listed in the activity column
2. The data table is linked to any of the partner's indicators
3. The data table is not linked to any indicators

Partners and Partner Managers never have access to data tables that **DO NOT** have a column designated as "Activity" as the column type in the design view.

If partners and partner managers still have trouble entering data into the system, make sure the Data Table Contributor and Data Table Manager permissions for their user group have been correctly set up.

Permissions for individual data tables

To specify what access partner users have to specific data tables, click on the **Design** tab for that data table. In the **Permissions** section at the bottom of the page, you can click on the dropdown menu to change that table's permissions for Partner users.

Columns

Add new column Save changes

Column	Type
Trainee ID	Unique ID
Sex	Disaggregation; Sex
Age	Disaggregation; Age

Permissions

Define what access partner users have to this table

No Access

Definition

Table Name: Trainees

Linked Indicators

This data table is not linked to any indicators.

Indicators cannot be mapped until these issues are resolved:

- No date column has been defined
- No geography column has been defined

Created by: [User] on: [Date]

Delete this data table Done

Note: If a table is set to 'View' or 'View & Edit' and **does not contain an Activity**, a Partner user can view or edit information in that table. Similarly, you can now add an Activity to a table and ensure Partner users have no access to that table by changing the Permissions to 'No Access'.
