

Interacting with Data Tables

Last Modified on 06/29/2018 12:37 pm EDT

Most users work with several thousand records in individual data tables. Much like Excel, DevResults allows you to interact with data tables to search for specific records, filter columns for specific information, and sort columns to group certain values together.

Search

To search for specific records in a data table, use the search bar at the top of the page. You can either search in a specific column by specifying the column name and then the value you're looking for (in the format ColumnName:Value), or you can search for the value itself.

The screenshot shows the DevResults interface for a 'Sample Project'. The main section is titled 'Trainees' and displays a data table. A search bar at the top contains the letter 'I'. On the left, a configuration panel shows various filters and their values, such as 'Activity: Activity', 'TraineeID: Trainee ID', 'Sex: Sex', 'Age: Age', 'TrainingType: Training Type', 'InitialTestScore: Initial Test Score', 'FinalTestScore: Final Test Score', 'PointsImproved: Points Improved', and 'Geography: Geography'. The data table below has columns for Age, Training Type, Initial Test Score, Final Test Score, Points Improved, and Geography. The table contains 10 rows of data, with the first row showing a 55+ (Senior) trainee with a Pre-Service training type and a Final Test Score of 0.77. The bottom of the interface shows a 'DevResults' logo and a 'Delete this data table' button.

Age	Training Type	Initial Test Score	Final Test Score	Points Improved	Geography				
55+ (Senior)	Pre-Service	0.83	0.77	-0.05999999	Centre Médical ...

Filter

You can filter your data table using the search bar at the top of the page or use the left hand configuration. You can filter for specific values in columns (for e.g.: to only look at records for male trainees), and for all records in a particular import.

Sort

If you have several thousand records and want to sort columns so you're looking at records with specific Activities first, for example, you can do so by clicking on the column heading. This automatically sorts values in that column.
