

# DevResults Information Requirements

Last Modified on 03/10/2025 5:23 pm EDT

## System Setup:

---

To create a new DevResults site, we provide a few templates that capture the program information needed to create a fully functional platform for monitoring and evaluation. These templates are designed specifically for each client based on your geographic areas of focus. Once we begin the setup process, DevResults staff will be available to walk you through each step. We can help organize and structure this program information.

### Required lists of program information:

- Activities (aka Projects, Awards, Initiatives, etc.)
- Organizations
- Results Framework(s)
- Indicators
- Disaggregations
- Locations
- Administrative Divisions
- Users
- Reporting Periods

### Required linkages between these lists of program information:

- Which indicators fall under which part(s) of the results framework(s)
- Which activities report on which indicators
- Which disaggregations go with which indicators
- Which activities report during which reporting periods
- Which organizations manage which activities
- Which activities report at which geographic places
- Which users are associated with which activities

This is the minimum amount of information required for DevResults to be functional per activity.

### Previous Data:

Previous indicator results can be added only after setup of the site is complete. If your previously recorded indicator results do not conform to the indicator definition you have specified in DevResults, there are five options for how to proceed:

- Track down the disaggregated data from its original source
- Estimate the disaggregations for previous data (inaccurate estimates could be misleading)
- Define previous data and future data with separate indicators (which makes it difficult to examine changes over time)
- Re-define the indicator to fit previous data (the data is less useful when less specific)
- Do not include any data that does not fit the indicator definition (loss of previous information and record of work)

### Information required to enable additional features:

Only after system setup is complete can other features be enabled.

Feature:	Task:	Detail:
Budget Tools	For each activity, list all budget line items, their amount, currency, source, date, type	Differentiate between accrued, disbursed, etc.
Filtering	For each activity, indicator, location, or organization: list a set of tags by which you'd like to filter information	Tags may go beyond or cut across the results frameworks, e.g. "climate", "gender", "faith-based", etc.
Checklists	For each activity, create checklists for non-quantitative goals	Enumerate their steps, give deadlines, assign persons responsible for completion and managers who can give approval
Logic Checks	Indicator results can be flagged if they fail to pass a common-sense logic test that compares the result to a set value or another indicator	e.g. "# individuals served" should be less than "Total population"
Other reporting	If you want to generate reports automatically from DevResults, Microsoft Word templates must be provided that note what information should be inserted where	
Data tables	If you intend to collect individual-level data or update DevResults data using arbitrary data sets	e.g. Hospital registers or student attendance lists
System syncs	If you want to regularly automatically import information to DevResults from other systems (like accounting), provide access to that system	Custom syncs will be developed in close collaboration with the engineering team
Calendar	You can add calendar events at the activity or program level once the site is live	
Document storage	You can store any kind of document or file per activity or at the program level once the site is live	
Photos	You can upload photos per activity once the site is live
