

# Notifications

Last Modified on 10/13/2019 2:40 pm EDT

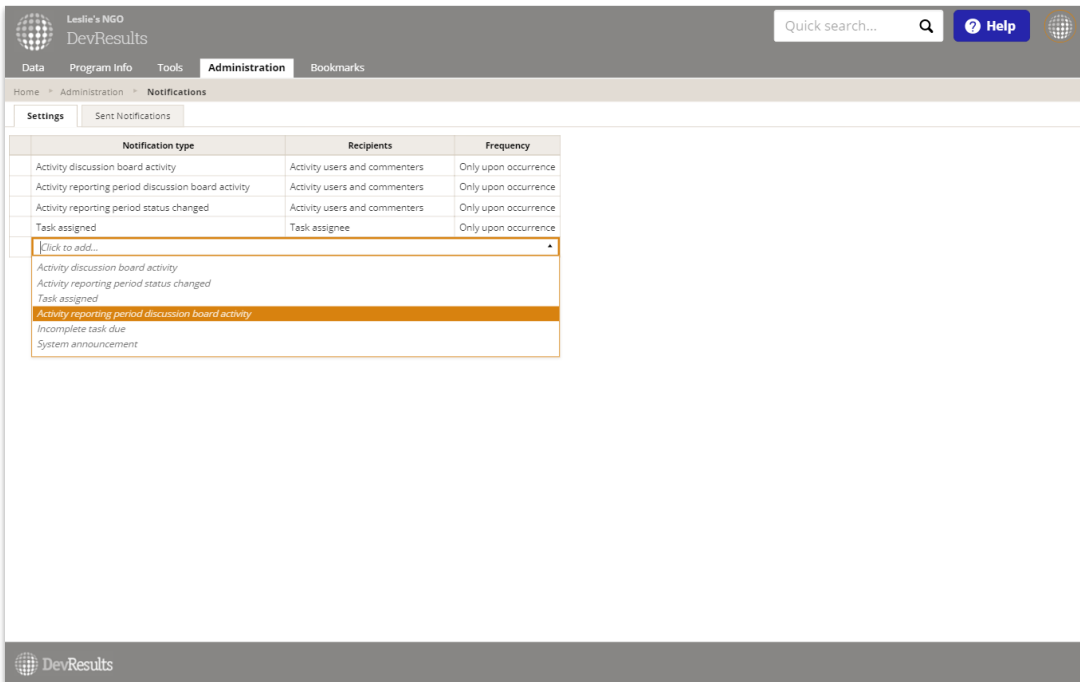

Site administrators can manage all notifications in DevResults and determine:

1. Who receives in-app and email notifications, and what they are notified about
2. How frequently they receive in-app and email notifications

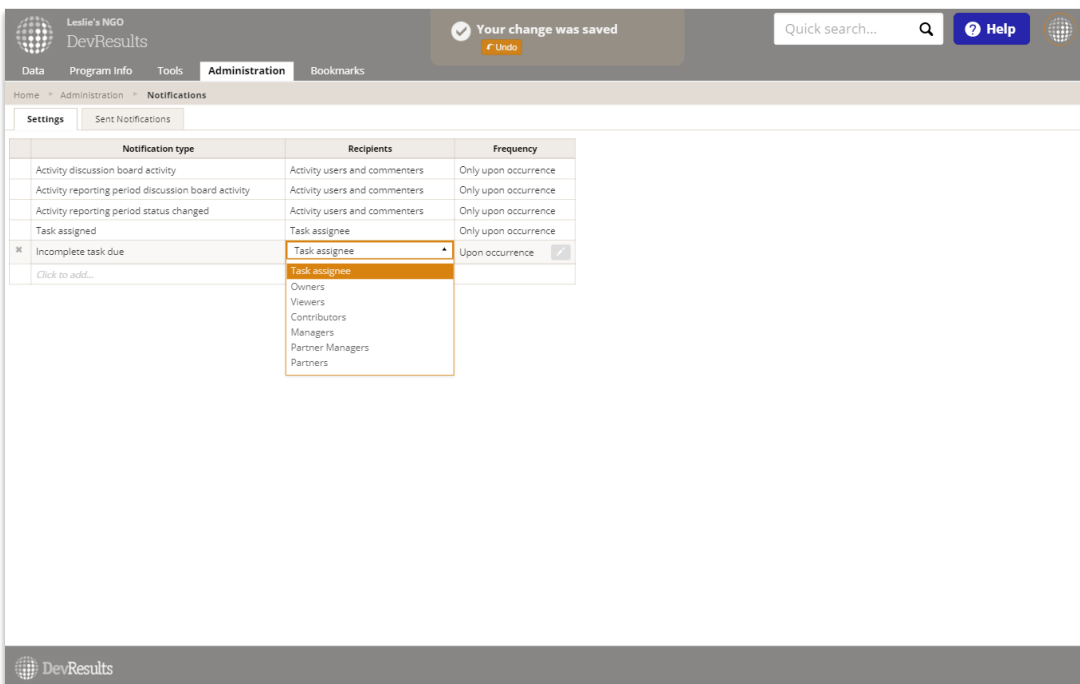

To set notification alerts, go to **Administration > Notifications**.

The screenshot displays the DevResults Administration interface. The 'Administration' menu is open, showing options like 'Users', 'Groups', 'Organizations', 'Partner Types', 'Settings', 'Tags', 'Sectors', 'Status Options', and 'Notifications'. The 'Notifications' option is highlighted. The dashboard includes several data visualizations: a bar chart for '4.1.1-c-D # students tested in 2016 Q3', a world map for '3.1.1-c', a bar chart for '3.1.1-c # MARP reached with 2015 Q1 2015 Q3 2016 Q1 2016 Q3', a pie chart for '3.1.1-d # insecticide treated nets (I...)', and a large number display for '4.1.1-c-D 2016 Q3 only' showing 311,798 individuals, and '4.1.1-c-D total to date' showing 1,942,680 individuals. The URL at the bottom is <https://leslie.devresults.com/en/administration/notifications>.

Add a new notification type by clicking on the empty bottom row and selecting an option from the dropdown list.

You can then edit the default notification recipient by selecting an option from the dropdown list.

You can also adjust the frequency with which notifications are delivered *for specific notification types*. Click on the pencil symbol to edit the frequency of notifications and add a schedule in the **Notification Frequency** pop-up.

You can edit the default frequency as needed and then click **Save**.

The designated users will now be notified in-app or to their email depending on their profile settings. Users can adjust the frequency of their email notifications by [Editing their Profile](#) .

You can view all sent notifications by clicking on the **Sent Notification** tab. Notifications can be filtered by individual users, groups of users, or by organization. Clicking on an individual notification gives you further details on the message sent, users notified, and any other meta data available.
