

# Partner Dashboards

Last Modified on 11/22/2019 2:05 pm EST

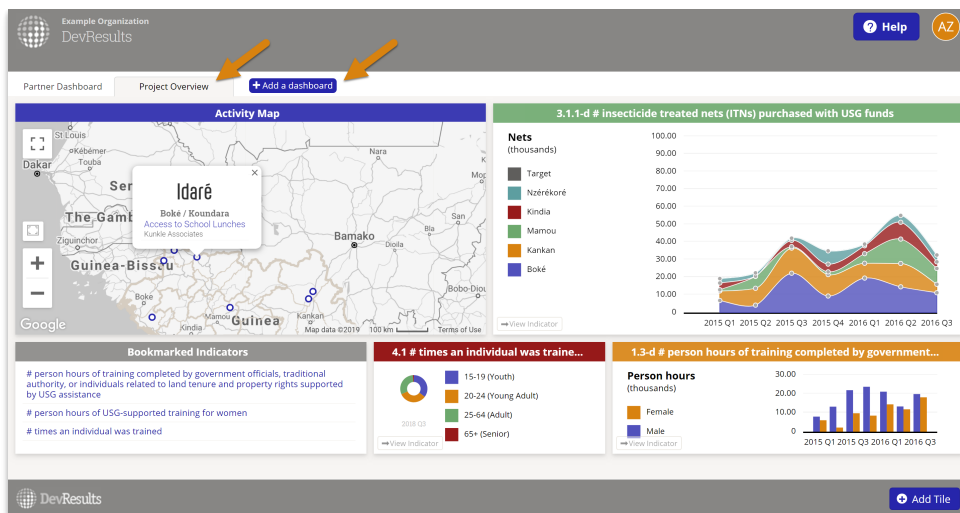

DevResults users have the option to make dashboards available to partners. To enable this option, go to *Administration > Settings*. In the Features section, select **Partner Dashboards**.

When partners log in, their landing page will be the same:

But they'll be able to add dashboards and **create dashboards**. Users with the "dashboard manager" permission will be able to **push dashboards** to partners.

Every tile visible to a partner will be automatically filtered to show only information that relates to their activities, so enabling partner dashboards won't change access or permissions.
